

Phase4Project-KitchenStory

App Name - KitchenStory.com V1.0.1

Buying food items made smooth. Use the app to burn your hunger. Add items, remove items and much more !!

Developer Name: Sushant Banerjee

Email: ban.prasu12@gmail.com

Available Scripts

npm install

Run this script in both, the root folder and the ExpressBackend folder to install all the dependencies.

npm start

After extracting the project, you first need to start the express backend server.

In the 'kitchen_story' folder, navigate to the 'ExpressBackend' folder. Open the terminal here and then run 'npm start'.

This will start the backend server at <http://localhost:3001>

Now, to start the frontend react server, navigate to the root folder 'kitchen_storyU', open the terminal there and then run 'npm start' command.

This will start the frontend server at <http://localhost:3000>
